

# Obesity, Energy Balance and Cancer: Lessons from Translational Studies

**Stephen D. Hursting, PhD, MPH**

Professor and Chair  
Department of Nutritional Sciences  
University of Texas at Austin  
and  
Professor, Department of Molecular Carcinogenesis  
University of Texas MD Anderson Cancer Center

WHAT STARTS HERE CHANGES THE WORLD

THE UNIVERSITY OF TEXAS AT AUSTIN

## Disclosure Information

---

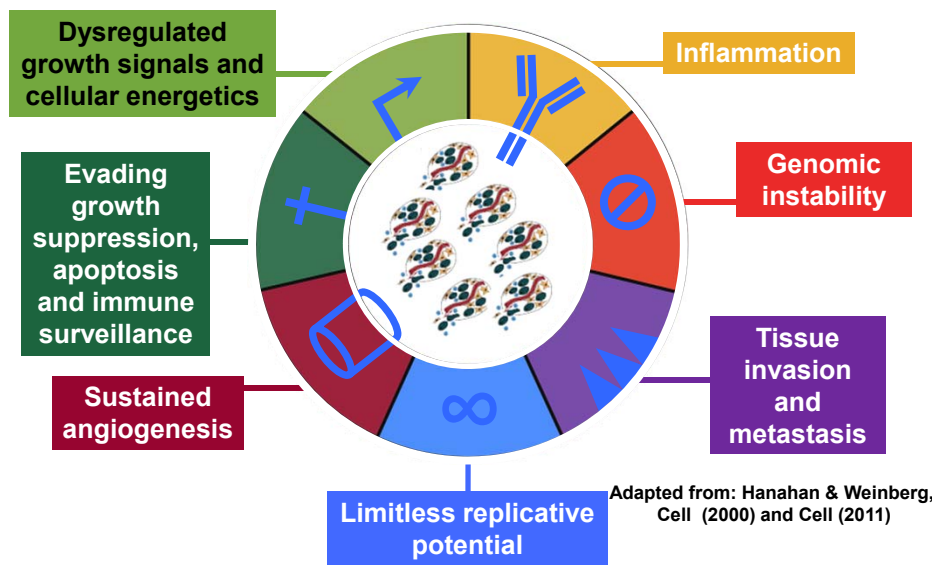

- I have no financial relationships to disclose
- I will discuss a preclinical study using Afinitor<sup>®</sup> (everolimus, Rad001) and preclinical and off-label clinical studies of Lovaza<sup>®</sup> (omega-3-acid ethyl esters)

## Today's Presentation

- The hallmarks of cancer and the scope of the cancer problem
- Links between diet, obesity, metabolism and cancer in humans and animals
- Where are we today? Diet recommendations (focus on phytochemicals, obesity prevention)
- Hot topics in nutrition, obesity and cancer: a focus on mechanisms
- Discussion

## Cancer: A Complex Foe

### *The essential aberrations of cancer*

## **Factors Contributing to Cancer Risk in the United States**

**Diet/Obesity: ~35%**

**Tobacco: ~30%**

**Occupational and Pollution: ~5%**

**Infection: ~10%**

**Other: ~20%**

- **Familial**
- **Sunlight / radiation**
- **Alcohol**
- **Long-term exposure to some drugs**

Doll and Peto, 1981

**Table 1.** Causes of cancer and potential reduction in cancer burden through preventive measures. N/A, not applicable.

Cause*	Percentage of cancer caused	Number of deaths in United States†	Magnitude of possible reduction (%)	Period of time (years)	Evidence example
Smoking	33	188,744	75	10–20	Comparison of lung cancer mortality by state (Fig. 1)
Overweight and obesity	20	114,390	50	2–20	Bariatric surgery and sustained changes in weight and markers (62)
Diet	5	28,600	50	5–20	Folate and colorectal cancer (63)
Lack of exercise	5	28,600	85	5–20	Adolescent physical activity (18)
Occupation	5	28,600	50	20–40	Asbestos workplace regulation (10)
Viruses	5	28,600	100	20–40	Liver cancer reduction by vaccine (22)
Family history	5	28,600	50	2–10	Bilateral oophorectomy for BRCA1/2 (34); aspirin trial for Lynch syndrome (11)
Alcohol	3	17,200	50	5–20	Regulation (64)
UV and ionizing radiation	2	11,400	50	5–40	Reduced medical exposures (65)
Prescription drugs	1	5,720	50	2–10	Hormone therapy–related drop in breast cancer (66)
Reproductive factors	3	17,200	0	N/A	N/A
Pollution	2	11,400	0	N/A	N/A
Total potential reduction‡ = 54.5%					

\*Adapted from Wolin *et al.* (67). †U.S. death estimates from the American Cancer Society (68). ‡Defined as sum (percentage caused by modifiable exposure × magnitude of reduction)

Colditz, *et al.* Applying What We Know to Accelerate Cancer Prevention. *Sci Transl Med*, 2012

## Fatalistic Beliefs about Cancer

- “Almost everything causes cancer...”
  - almost 50% agree or strongly agree
- “There’s not much a person can do to prevent cancer...”
  - approximately 25%
- “It’s hard to know [which recommendations] to follow...”
  - almost 75%

Food, Nutrition, Physical Activity and the Prevention of Cancer: The AICR/WCRF Expert Reports

### AICR/WCRF Expert Report Recommendations

RECOMMENDATIONS
<b>BODY FATNESS</b> Be as lean as possible within the normal range of body weight
<b>PHYSICAL ACTIVITY</b> Be physically active as part of everyday life
<b>FOODS AND DRINKS THAT PROMOTE WEIGHT GAIN</b> Limit consumption of energy-dense foods Avoid sugary drinks
<b>PLANT FOODS</b> Eat mostly foods of plant origin
<b>ANIMAL FOODS</b> Limit intake of red meat and avoid processed meat
<b>ALCOHOLIC DRINKS</b> Limit alcoholic drinks
<b>PRESERVATION, PROCESSING, PREPARATION</b> Limit consumption of salt Avoid mouldy cereals (grains) or pulses (legumes)
<b>DIETARY SUPPLEMENTS</b> Aim to meet nutritional needs through diet alone
<b>BREASTFEEDING</b> Mothers to breastfeed; children to be breastfed
<b>CANCER SURVIVORS</b> Follow the recommendations for cancer prevention

1997

2007

2008-2017: Continuous Update Project

1940's Advertisement from the United Kingdom

**Diets should contain a variety of plant-based foods**  
WCRF/AICR 2007

## Bioactive Food Components Influence Cancer Processes

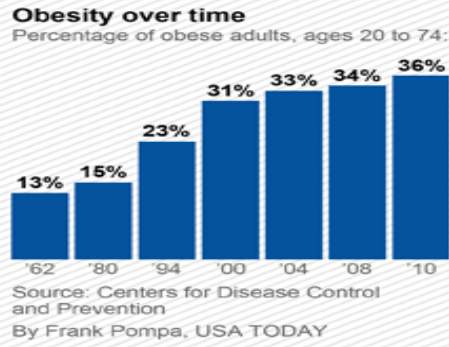

## The Shape of Things to Come. The Economist 12/11/03

([http://www.economist.com/displaystory.cfm?story\\_id=2282754](http://www.economist.com/displaystory.cfm?story_id=2282754))

## The US Obesity Epidemic

### Ogden, et al., JAMA 2014:

- 69% of US Adults Overweight or Obese (BMI >25.0 kg/m<sup>2</sup>)
- 36% US Adults Obese (BMI >30.0 kg/m<sup>2</sup>)
- 6.5% US Adults Extremely Obese (BMI >40.0 kg/m<sup>2</sup>)

## Metabolic Syndrome

**Describes a state of metabolic dysregulation characterized by:**

- Insulin resistance, hyperglycemia\*
- Dyslipidemia (↑triglycerides\*, ↓HDL-C\*)
- ↑Waist circumference\*
- Hypertension\*
- Proinflammatory state (↑cytokines, ↑chemokines)
- Vascular perturbations (↑PAI-1, ↑VEGF)
- Altered adipokines (↑leptin, ↓adiponectin)
- Elevated bioavailable IGF-1 (NHANES)

- **Associated with many types of cancer**

25% (144K) cancer deaths/year in US caused by overweight/obesity

(Calle, et al., *NEJM* 2003; Colditz, et al. *Science Transl Med*, 2012)

## Mortality from Cancer According to BMI for U.S. Women in the ACS Cancer Prevention Study II

Calle, E. et al. N Engl J Med 2003;348:1625-1638

### LOOMING QUESTION:

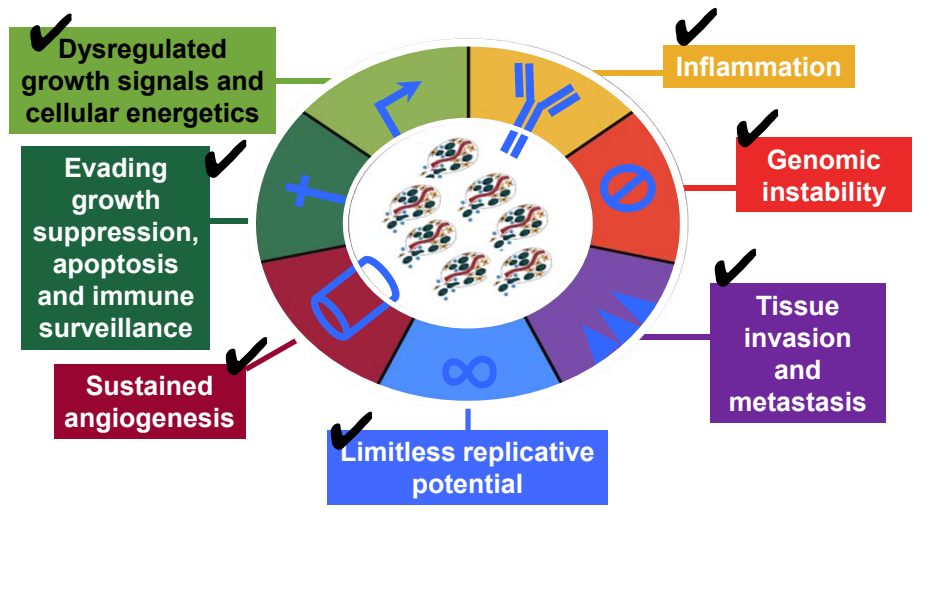

**How to Decrease Cancer Risk in the  
~710 Million Adults Worldwide Currently Obese?**

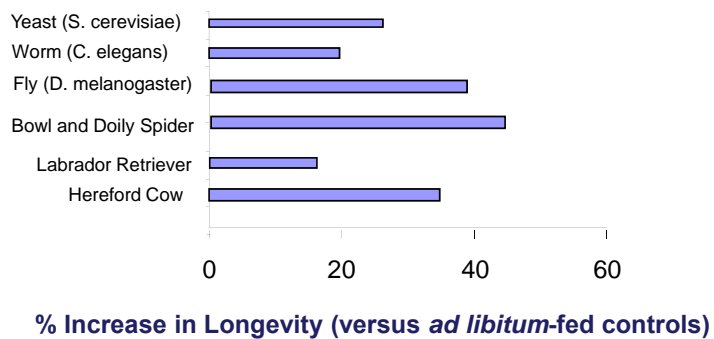

Need a mechanistic approach to identify targets and strategies to break obesity-cancer links

# Cancer: A Complex Foe

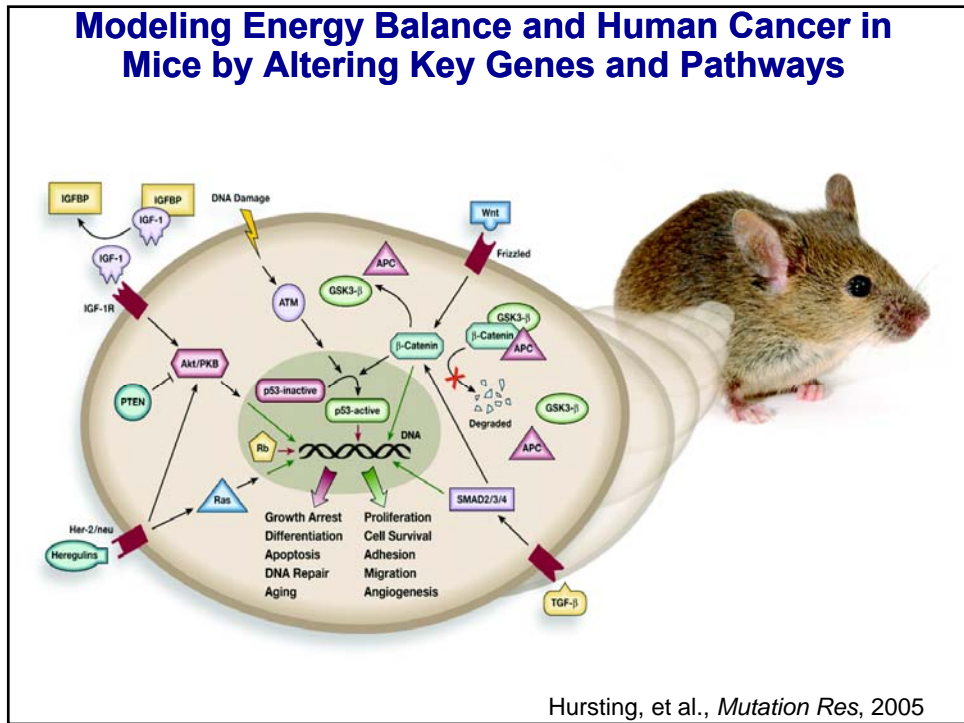

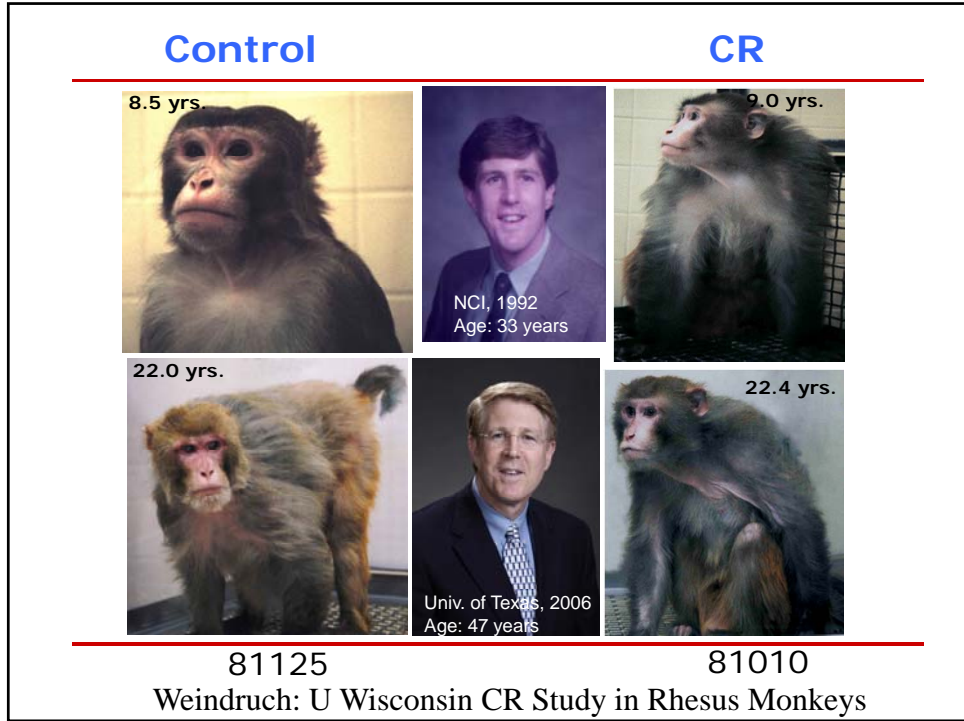

Obesity, calorie restriction impact each cancer hallmark

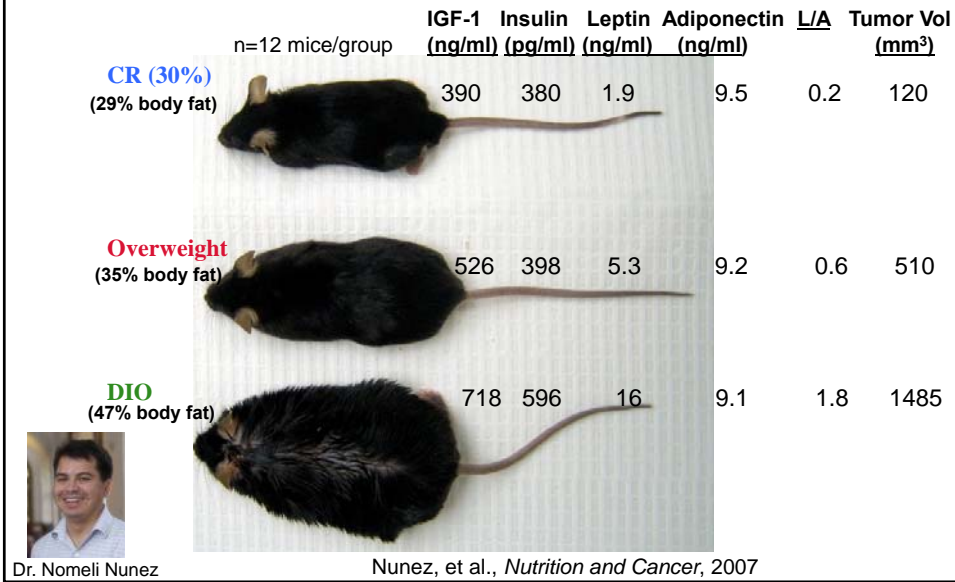

## Calorie Restriction (~20%) Extends Lifespan in Multiple Species

Hursting, et al. J Nutr, 2004

## Growth Factor Levels and MMTV-Wnt-1 Mammary Tumor Growth in Lean, Overweight and Obese Mice

## Transplanted Wnt-1 Tumor Growth in AZIP/F-1 (Fatless) Mice Versus Wild-Type Mice

Hursting et al., *Cancer Res*, 2007

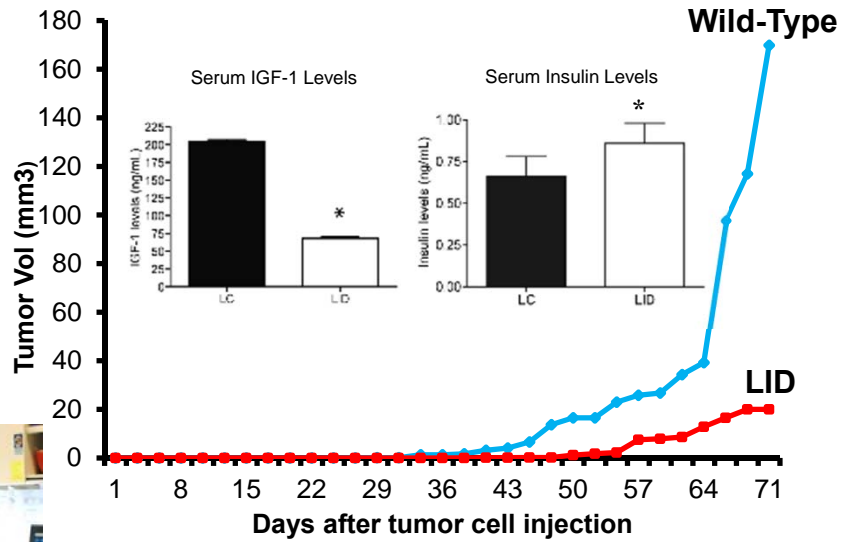

## Genetic Reduction of Systemic IGF-1

~75% of IGF-1 in serum is produced by liver

Ecuadorians with Laron Syndrome have very low IGF-1 and inflammatory cytokines, increased longevity, and virtually no cancer or diabetes.  
*NY Times* 2/16/11.

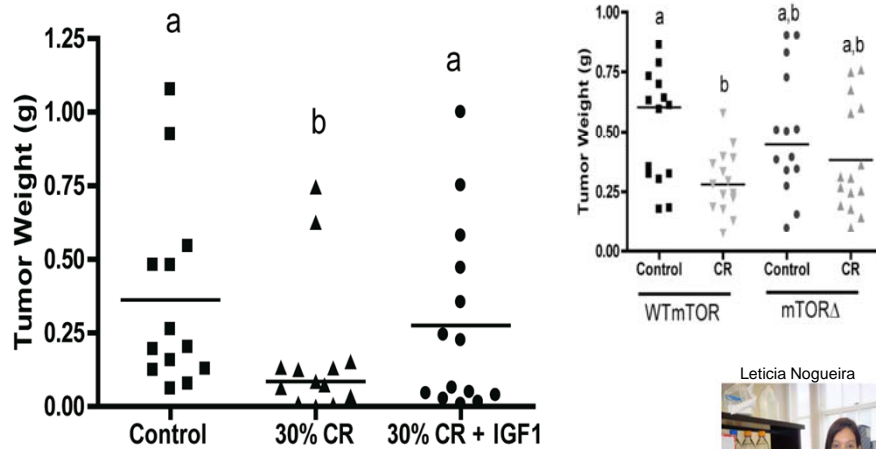

## Transplanted Wnt-1 Mammary Tumor Growth in Wild-Type Control and Liver IGF-1 Deficient (LID) Mice

Dr. Nikki Ford

Ford, et al. *Endocrine-Related Cancer*, in press

## IGF-1 Infusion or mTOR Activation Impacts Transplanted MMTV-Wnt-1 Mammary Tumor Growth in Calorie Restricted Mice

Nogueira et al. *Endocrine-Related Cancer*, 2012

Leticia Nogueira

## Dietary Energy Balance Modulation of Akt/mTOR Signaling (normal and tumor tissue)

Skin  
Liver  
Prostate  
Colon  
Pancreas  
Mammary

Hursting, et al., *Cancer Res*, 2007

Olive-Marston, et al., *Mol Carcinogenesis* 2009  
Lashinger, et al., *Cancer Prev Res*, 2011  
Blando, et al., *Cancer Prev Res*, 2011  
Nogueira, et al., *Endocr Rel Cancer*, 2012  
deAngel, et al., *Mol Carcinogenesis*, 2013

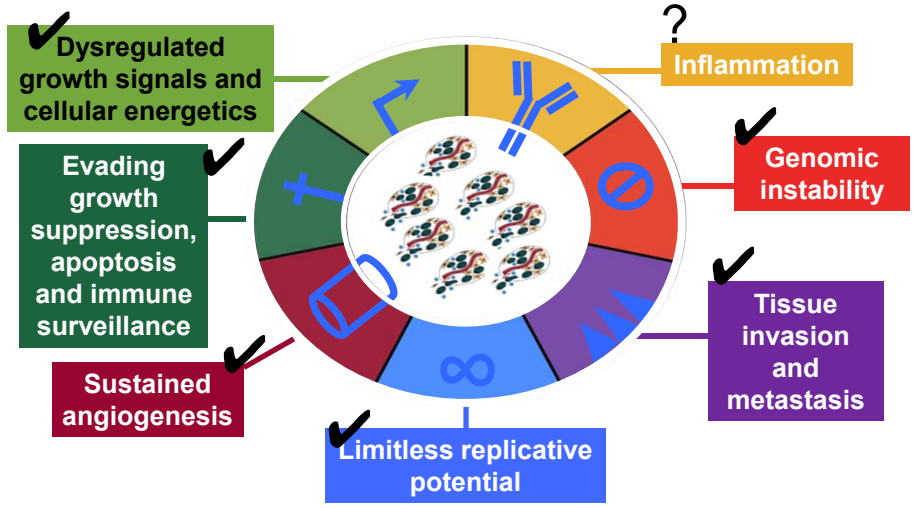

## RAD001 (Afinitor®) Inhibits mTOR and Wnt-1 Mammary Tumor Growth in Lean, Control and Obese Mice

DeAngel, et al. *Mol Carcinogenesis*, 2013

## Cancer: A Complex Foe

Obesity, CR impact the essential aberrations of cancer

# Inflammation and Cancer

- Malignancies often arise from areas of chronic infection and inflammation
- Chronic inflammatory conditions linked to tumorigenesis include:
  - Gastritis (H. Pylori) – Gastric Cancer
  - Cystitis – Bladder Cancer
  - Bronchitis – Lung Cancer
  - Esophagitis – Esophageal Cancer
  - Dermatitis – Skin Cancer
  - Ulcerative colitis – Colon Cancer
  - Inflammatory bowel disease – Colon Cancer
  - Hepatitis (including NASH) – Liver Cancer
  - Pancreatitis – Pancreatic Cancer (up to 55-fold increased risk)

## Obesity Causes Inflammation in Organs and Visceral Fat

## Energy Balance, Metabolism and Cancer: Transdisciplinary Research Approaches

## Translational Example 1: CR Pilot Trial in Obese Postmenopausal Women

28 High Risk  
Women:  
BMI >30 kg/m<sup>2</sup>  
No HRT

### Response Biomarkers

#### FNA Tissue Markers

RPPA;qRT-PCR;  
insulin, cytokines,  
adipokines, E&T,  
IGF1, IGFBP-3

#### Proliferation (Ki-67)

#### Mammographic Breast Density

#### Serum

insulin, cytokines,  
adipokines, E&T,  
IGF1, IGFBP-3

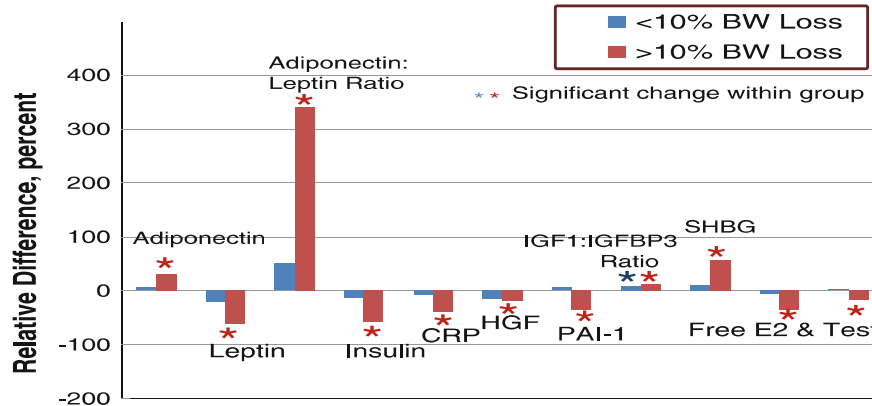

*Breast Cancer Res Treat* 2013

### Favorable modulation of benign breast tissue and serum risk biomarkers is associated with >10 % weight loss in postmenopausal women

## Example 2. Integrated Phase II Trial and Animal Studies of Lovaza® (omega-3-acid ethyl esters)

C. Fabian, MD

**Serum/Benign Breast Tissue Biomarkers**

- Response:** Ki-67, cytomorphology
- Mechanism:** qRTPCR: ER-genes; miR's  
Proteomics: mTOR, MAPK signaling; Cytokines

S. Hursting, PhD, MPH

*Breast Cancer Research Foundation Grant; Kansas Biomedical Authority Grant*

## Lovaza Improves Glucose Tolerance and Decreases Serum Insulin and IGF-1 in Obese Mice

Ford, Fabian and Hursting, unpublished

## Lovaza Modulates Mammary Inflammation-Related Genes in Obese Mice

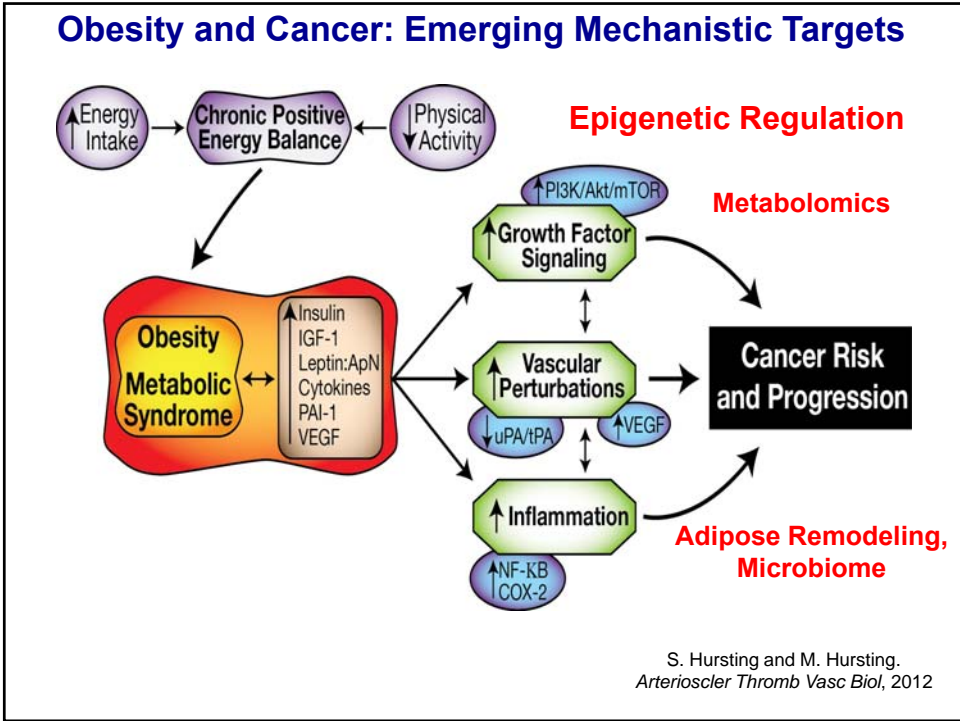

Inflammation-Related Genes	Lovaza® (208 mg/kg)	
10/176 on panel	Fold change (relative to control)	P-value
Interleukin 10 (IL10)	3.9	<0.01
Chemokine (C-X-C motif) ligand 5 (CXCL5)	-2.9	0.04
Chemokine (C-C motif) receptor 3 (CCR3)	-3.2	0.02
Interleukin 3 (IL3)	-4.0	0.01
Interferon alpha 2 (Ifna2)	-5.1	0.03
Interleukin 2 (IL2)	-2.8	<0.01
Chemokine (C-C motif) ligand 2 (CCL2)	-2.0	0.03
Interferon beta 1 (Ifnb1)	-5.2	<0.01
C-reactive protein (CRP)	-2.4	0.04
Epregrulin (Ereg)	-3.6	0.01
